Beginner setup and supply checklist

Choose printed sublimation or cut-sheet Infusible Ink, then check the supplies for your method.

Choose your method and item

Method: printed sublimation or cut-sheet Infusible Ink

[ ] Record the exact blank SKU, composition, coating, and supplier-supported process.
[ ] Measure usable artwork space, including seams, handles, and other obstacles.

Printed sublimation only

[ ] Record the compatible printer, installed sublimation ink, and transfer paper products.
[ ] Verify imageable width and height for the selected printer feed path, including margins.

Cut-sheet Infusible Ink only

[ ] Record the compatible cutter, blade, cutting mat, and pre-inked transfer sheet.
[ ] Check usable cutter/mat area and sheet size. No printer, ink bottle, or transfer paper is needed for this path.

Both methods: complete the setup

[ ] Record the exact press model; verify usable contact area and blank geometry.
[ ] List the protective layers, cleaning, fixation, and heat-safe handling supplies required by the exact instructions.
[ ] Check what you own and what is included before buying extras.
[ ] Save the source URL and check date. Resolve conflicting or missing directions before heating.

Before the final item

[ ] Verify preparation, mirror direction, layer order, cooling, and removal for this method.
[ ] Follow equipment and material safety directions; test first where the supplier recommends it.
[ ] Record source settings separately from actual settings and results in the material log.
